

App review request for DMSpark (app ID 4341279666187863)

Downloaded on September 2, 2026, 9:32 AM PDT

Permission usage

[instagram_business_basic] Tell us how you're using this permission or feature How our app uses this permission: DMSpark uses the instagram_business_basic permission to authenticate and identify the Instagram Business or Creator account connected to our platform. We use it to retrieve basic profile metadata (like username and profile picture) to display in our dashboard. We also use this to fetch the user's media (posts and Reels) so they can select specific posts to attach targeted 'Comment-to-DM' automation rules. Note: We are requesting instagram_business_basic primarily as a required dependent permission to support our core functionality, which utilizes instagram_business_manage_messages and instagram_business_manage_comments. Instructions for the Reviewer to test: Please navigate to our live application at: https://www.dmspark.in/ Click the 'Login' or 'Connect Instagram' button on the homepage. Proceed through the standard Facebook Login OAuth flow and connect your test Instagram Professional account. Once authenticated, you will be redirected to the DMSpark Dashboard. Look in the top navigation bar and sidebar; you will see the profile picture and username of the Instagram Professional account you just connected displayed natively within our app interface. Navigate to the 'Automations' tab and select a Comment trigger; you will see a list of media fetched from the connected account.
[instagram_business_basic] Provide a detailed step-by-step video walkthrough of how your app will use this permission or feature so we can confirm it is used correctly and does not violate our policies. • video
[instagram_business_basic] The instagram_business_basic allows your app to read an Instagram Business account profile's info and media. The allowed usage for this permission is to get basic metadata of an Instagram Business account profile, for example username and ID. You may also use this permission to request analytics insights to improve your app and for marketing or advertising purposes, through the use of aggregated and de-identified or anonymized information (provided such data cannot be re-identified). If approved, I agree that any data I receive through instagram_business_basic will be used in accordance with the allowed usage.
[instagram_business_manage_messages] Tell us how you're using this permission or feature How our app uses this permission: DMSpark uses the instagram_business_manage_messages permission as the primary engine for our automation platform. It allows our backend to listen for incoming Direct Messages via webhooks, scan those messages for keyword triggers defined by the business owner, and automatically send predefined text, links, or AI-generated responses back to the Instagram user in real-time. It is also used to populate our manual 'Live Inbox' dashboard so business owners can chat directly with their audience, managing customer support and lead generation efficiently. Instructions for the Reviewer to test: Please navigate to our live application at: https://www.dmspark.in/ Click the 'Login' or 'Connect Instagram' button and complete the Facebook Login OAuth flow with your test Professional account. Once authenticated and inside the DMSpark Dashboard, navigate to the 'Automations' tab and click 'Create Automation'. Select a 'DM Keyword' trigger rule. Set a trigger keyword (e.g., 'hello' or 'price'). Set a text response (e.g., 'Hi there! The price is \$10.'). Save and activate the rule. Using a separate, secondary test Instagram account on your mobile device, send a Direct Message containing the exact keyword to the connected Professional account. You will immediately receive the automated text reply back in the chat via the Graph API. Additionally, if you open the 'Inbox' tab in the DMSpark dashboard, you will be able to see this conversation thread and manually reply to the test account, confirming the read/write messaging capability.
[instagram_business_manage_messages] Provide a detailed step-by-step video walkthrough of how your app will use this permission or feature so we can confirm it is used correctly and does not violate our policies. • video
[instagram_business_manage_messages] The instagram_business_manage_messages permission allows an app to access messages on an Instagram professional account. The allowed usage for this permission is to view, manage and respond to messages, and to use third-party customer relationship management (CRM) tools to manage messages. You may also use this permission to request analytics insights to improve your app and for marketing or advertising purposes, through the use of aggregated and de-identified or anonymized information (provided such data cannot be re-identified). If approved, I agree that any data I receive through instagram_business_manage_messages will be used in accordance with the allowed usage.

[instagram_business_manage_comments] Tell us how you're using this permission or feature How our app uses this permission: DMSpark uses the <code>instagram_business_manage_comments</code> permission to power our core 'Comment-to-DM' marketing funnels. We use this permission to listen for incoming comments on a business's Instagram posts via webhooks, scan those comments for specific keyword triggers defined by the business owner, and automatically reply publicly to the comment (e.g., 'Check your DMs!') while simultaneously triggering a private automated Direct Message to that user. This significantly increases engagement and lead generation for creators. Instructions for the Reviewer to test: Please navigate to our live application at: https://www.dmspark.in/ Click the 'Login' or 'Connect Instagram' button and proceed through the Facebook Login OAuth flow with your test Professional account. Once logged into the DMSpark Dashboard, navigate to the 'Automations' tab and click 'Create Automation'. Select a 'Comment Keyword' trigger rule. Set a trigger keyword (e.g., 'link'). Type in a public comment reply (e.g., 'Sending it now!') and a private DM message (e.g., 'Here is the link you requested!'). Save and activate the automation rule. Using a secondary test Instagram account on your mobile device, navigate to the connected Professional account's profile and leave a comment with the keyword 'link' on one of their posts. You will immediately see that the app automatically replies to the comment using the Graph API and sends the configured Direct Message.
[instagram_business_manage_comments] Provide a detailed step-by-step video walkthrough of how your app will use this permission or feature so we can confirm it is used correctly and does not violate our policies. • video
[instagram_business_manage_comments] The <code>instagram_business_manage_comments</code> permission allows an app to access comments on an Instagram professional account, as well as public posts and Instagram Stories where that account is tagged or mentioned in comments. The allowed usage for this permission is to create, update and delete comments for an Instagram professional account. You may also use this permission to request analytics insights to improve your app and for marketing or advertising purposes, through the use of aggregated and de-identified or anonymized information (provided such data cannot be re-identified). If approved, I agree that any data I receive through <code>instagram_business_manage_comments</code> will be used in accordance with the allowed usage.
[public_profile] Tell us how you're using this permission or feature
[public_profile] The <code>public_profile</code> permission allows apps to read the Default Public Profile Fields on a User node. The allowed usage for this permission is to authenticate app users and provide them with a personalized in-app experience. This permission is automatically granted to all apps. You may also use this permission to request analytics insights to improve your app and for marketing or advertising purposes, through the use of aggregated and de-identified or anonymized information (provided such data cannot be re-identified). If approved, I agree that any data I receive through <code>public_profile</code> will be used in accordance with the allowed usage.
[Human Agent] Tell us how you're using this permission or feature "Our application, DMSpark, provides a built-in live inbox dashboard for creators and businesses. We use the Human Agent feature to allow business owners to manually step in and reply to customer support queries or complex questions within the extended 7-day window. This is critical for our platform because while our automated keyword bots handle initial triage, manual intervention is frequently required by the business owner to resolve specific, nuanced customer issues."
[Human Agent] Provide a detailed step-by-step video walkthrough of how your app will use this permission or feature so we can confirm it is used correctly and does not violate our policies. • video
[Human Agent] The Human Agent feature allows your app to have a human agent respond to user messages using the <code>human_agent</code> tag within 7 days of a user's message. The allowed usage for this feature is to provide human agent support in cases where a user's issue cannot be resolved in the standard messaging window. Examples include when the business is closed for the weekend, or if the issue requires more than 24 hours to resolve. If approved, I agree that any data I receive through Human Agent will be used in accordance with the allowed usage.

Data handling

--

processor-0. Do you have data processors or service providers, including your own companies, that will have access to the Platform Data that you obtain from Meta? Data processors or service providers are separate entities that, on your behalf, process the Platform Data made accessible to you in order to provide you with a service. Please provide the names of any processors that will have access to the Platform Data made accessible to you through the requested permissions and features. "Platform Data" is any data that you receive from Meta (e.g., Meta user ID, email address, profile picture, Meta API user access token, and app secret).

Yes

processor-2. List all data processors or service providers, including your own companies, that will have access to the Platform Data that you obtain from Meta. Please note that Platform Data may include a subset of personal data or personal information that relates to an identified or identifiable person.

- Vercel Inc.
 - **processor-1a. For which category of services will this data processor process the personal data of users received from Meta? Select all that apply.**
 - IT solutions and services, including cloud storage and processing
 - **processor-1b. List all countries where this data processor will process the personal data of users received from Meta. Include locations from which the data processor will access the data remotely, via the internet. Select all that apply. Many data processors provide this information on their corporate website.**
 - United States of America
- Neon Inc.
 - **processor-1a. For which category of services will this data processor process the personal data of users received from Meta? Select all that apply.**
 - Other
 - **processor-1b. List all countries where this data processor will process the personal data of users received from Meta. Include locations from which the data processor will access the data remotely, via the internet. Select all that apply. Many data processors provide this information on their corporate website.**
 - Singapore

responsible-1. Who is the person or entity that will be responsible for all Platform Data Meta shares with you? Please provide the name of the legal entity that will control the data (i.e., determine the purposes and means of processing the data) made available to you by Meta through the requested permissions and/or features. This could be a natural or legal person, a public authority, an agency or other entity. In some regions this is called a data controller.

VIRTUALREVOLUTION PRIVATE LIMITED

responsible-2. Select the country where this person or entity is located.

India

requests-3. Have you provided the personal data or personal information of users to public authorities in response to national security requests in the past 12 months? This does not include requests related to search warrants or court orders associated with criminal investigations. Personal data or personal information is any data you receive from Meta that relates to an identified or identifiable person.

No

requests-4. Which of the following policies or processes do you have in place regarding requests from public authorities for the personal data or personal information of users? Check all that apply.

- Required review of the legality of these requests.

Web reviewer instructions

Provide instructions for accessing the app so we may complete our review. Explain how to navigate to the app, and provide instructions for testing.

"To review our app (DMSpark), please follow these steps: 1. Access the App: Navigate to our live application at: <https://www.dmspark.in> 2. Authentication (Facebook Login): On the homepage, click the 'Connect Instagram' or 'Login' button. This integrates standard Facebook Login. You will be prompted to log in with a Facebook account that manages an Instagram Business or Creator account. Note: We use the Facebook Login flow to request advanced access for public_profile, email, and the necessary Instagram Graph API permissions to enable the automation features. 3. Testing the Automation Features: After a successful login, you will be redirected to the DMSpark Dashboard. Navigate to the Automations tab and click 'Create Automation'. Select DM Keyword Trigger and set a keyword (e.g., 'hello'). Set a response message (e.g., 'Hi there! Thanks for testing.'). Save and activate the rule. To verify it works, use a separate test Instagram account on your mobile device to send a Direct Message containing the keyword 'hello' to the Instagram account you just connected. The app will automatically reply with your configured response via the Instagram Graph API. You can also test the 'Comment-to-DM' feature similarly by creating a comment trigger rule and commenting on one of the connected account's posts."

Is Facebook Login integrated on this platform?

Yes

(optional) If payment or membership is required to access the full functionality of this app, provide access codes or test credentials so we can access and review all features on this app. Codes should be active for one year after submission.

(optional) If payment is required to download this app, provide 8–10 gift codes so we can download it from app stores without payment. Codes should be active for one year after submission. Include any codes or test credentials required to access in-app subscriptions, purchases, or features.

(optional) If access to this app or any of its features is limited to users within a specific geographic location or restricted by geo-blocking or geo-fencing, explain the restrictions and provide a list of locations. For example, specify the countries where the app can be accessed.

Include supporting documentation. (Optional) For example, you can upload a screen recording or images that show how to access the app, log in, and how the app uses Meta APIs. You can upload multiple files, maximum 2 GB each. We accept .xls, .xlsx, .csv, .doc, .docx, .pdf, .txt, .jpeg, .jpg, .png, .ppt, .pptx, .mov, .mp4, .zip and .zipx.
